Lifeways of Canada

Incorporated in 1972, Lifeways of Canada Limited is Alberta's first and oldest historical resources consulting and contracting company, providing services to both government and private industries in western Canada and the adjacent United States.

Lifeways provides a range of archaeological and historical resources project management services to clients across the spectrum. Our clients include large and small-scale developers including many large oilsands clients, wind farms, Forestry Management Areas, suburban developers, infrastructure, and all aspects of oil and gas projects.

Protection of cultural properties and resources are regulated by municipal, provincial, territorial, or federal legislation. Developments which may affect these resources are required to conform to the relevant approval process. Lifeways' staff are intimately familiar with these requirements throughout all jurisdictions in western Canada and are ready to provide all services that will satisfy these requirements.
